Acton Municipal Utility District (817) 326-4720

(Consumer Confidence Report)

2001 Drinking Water Quality Report

June 11, 2002

Acton Municipal Utility District (AMUD) is committed to providing residents with safe and reliable supply of high-quality drinking water. We test our water using sophisticated equipment and advanced procedures. Acton Municipal Utility District's water meets state and federal standards for both appearance and safety. This annual "Consumer Confidence Report," required by the Safe Drinking Water Act (SDWA), tells you where your water comes from, what our tests show about it, other things you should know about drinking water and AMUD.

We Are Proud To Report That The Water Provided By Acton Municipal Utility District Meets Or Exceeds All Federal (EPA) Drinking Water Quality Standards.

En Espanol

Este reporte incluye informacion importante sobre el agua para tomar. Si tiene preguntas o'discusiones sobre este reporte en espanol, favor de llamar al tel. (817) 326-4720 par hablar con una persona bilingue en espanol.

This report is a summary of the quality of the water we provide our customers. The analysis was made by using the data from the most recent U.S. Environmental Protection Agency (EPA) required tests and is presented in the attached pages. We hope this information helps you become more knowledgeable about what's in your drinking water.

Overview

In 2001, AMUD distributed more than 662 million gallons of water to our customers. AMUD has grown from 4,988 water connections in December of 2000 to 5,213 water connections in December of 2001.

A number of improvements to our water system have been completed or are currently underway. We have added 5,000 feet of 16-inch water mains, 2,000 feet of 8-inch water lines and 12,000 feet of 6-inch water lines. We have also installed 32 new fire hydrants and have installed 109 additional valves throughout the District to improve fire protection and dependability of service.

To check for toilet leaks, put a few drops of dye in the tank. Your fixture needs adjustment or repair if the dye appears in the bowl. Check for leaks in the underground pipe by turning off all faucets. Then look at your water meter. If it's running, you have a leak.

Choose plants adapted to this region and soil conditions. Don't cut the grass too short during hot weather. Taller grass holds moisture better.

Last fall, construction was completed on our new 500,000 gallon elevated tank located on Lusk Branch Court. This tank is providing additional elevated storage for improved dependability of service in the Acton area. Expansion of the Surface Water Advanced Treatment System (SWATS) Plant is scheduled for completion this summer, providing us with an additional 2.65 million gallon per day (mgd) of treated water. In addition, two new wells in the Pecan Plantation area are scheduled for completion in July. These projects will help us ensure water supplies will be adequate to meet growth throughout the District.

Public Participation Opportunities

We encourage public interest and participation in our community's decisions affecting drinking water.

Regular Board Meetings occur on the third Monday of every month, at the District Office, 2001 Fall Creek Hwy, the meetings begin at 9:00 AM. The public is welcome. Consult our Web Site at www.amud.com and/or contact us at (817) 326-4720, for further information, see U.S. Environmental Protection Agency (EPA) water information at www.epa.gov/safewater/

Water Source

Acton Municipal Utility District is supplied by surface water from Lake Granbury, and we pump groundwater from eighteen water wells located throughout our District. These sources are blended throughout the system. The water from Lake Granbury is treated at the SWATS Plant located on Matlock Road off of Hwy 167.

Special Notice for the ELDERLY, INFANTS, CANCER PATIENTS, people with HIV/AIDS or other immune problems: some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

All Drinking Water May Contain Contaminants.

When drinking water meets federal standards there may not be any health-based benefits to purchasing bottled water or point of use devices.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Hotline (800-426-4791).

Water only when the grass needs watering. The grass will turn an off color and

footprints will remain when it needs water. When it needs water, water deeply.

This promotes deep roots and healthy grass.

Abo

ut The Following Pages

The pages that follow list all of the federally regulated or monitored constituents which have been found in your drinking water. U.S. EPA requires water systems to test up to 97 constituents.

Secondary Constituents – Many constituents (such as calcium, sodium, or iron) which are often found in drinking water, can cause taste, color, and odor problems. The taste and odor constituents are called secondary constituents and are regulated by the State of Texas, not EPA. These constituents are not causes for health concerns. Therefore, secondary constituents are not required to be reported in this document but they may greatly affect the appearance and taste of your water.

DEFINITIONS

Maximum Contaminant Level (MCL)

The highest permissible level of a contaminant in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG)

The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

Treatment Technique (TT)

A required process intended to reduce the level of a contaminant in drinking water.

Action Level (AL)

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

NTU - Nephelometric Turbidity Units

MFL – million fibers per liter (a measure of asbestos)

pCi/I – picocuries per liter (a measure of radioactivity)

ppm – parts per million, or milligrams per liter (mg/l)

ppb – parts per billion, or micrograms per liter (mg/l)

ppt - parts per trillion, or nanograms per liter

ppq – parts per quadrillion, or picograms per liter

Checking for leaks, taking shorter showers and practicing sound outdoor watering principles can reduce water bills and conserve this precious natural resource. Efficient use of our water resources should always be practiced, not just when rainfall is significantly below average for the year. Water is a resource that cannot be manufactured.

INORGANICS

Year	Constituent	Highest Level at Any Sampling point	Range of Detective Levels	MCL	MCLG	Unit of Measure	Source of Constituent
2001	Arsenic	2	0.0000- 2.0000	50	0	ppb	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes.
2001	Barium	0.061	0.0170- 0.0610	2	2	ppm	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
2000	Fluoride	0.5	0.2000- 0.5000	4	4	ppm	Erosion of natural deposits; Water additive which promotes strong leeth; Discharge from fertilizer and aluminum factories.
2001	Nitrale	0.4000	0.0000- 0.4000	10	10	ppm	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
2001	Sodium	217	173.0000- 217.00	NA	NA	ppm	Erosion of natural deposits; By-product of oil field activity
2000	Gross alpha adjusted	1.4	1.4000- 1.4000	15	0	pci/l	Erosion of natural deposits.

NA - MCL not applicable - not regulated Special Monitoring Requirement.

ORGANICS NOT TESTED FOR OR NOT DETECTED

Disinfection By-Products

Year	Constituent	Average of All Sampling Points	Range of Detective Levels	MCL	MCLG	Unit of Measure	Source of Constituent
2001	Total Trihalomethancs	21.29	0.00-45.30	100	0	ppb	By-product of drinking water chlorination.

Unregulated Contaminants

Year	Constituent	Average of All Sampling Points	Range of Detective Levels	Unit of Measure	Reason for Monitoring
2001-2001	Chloroform	0.93	0.0000- 3.1000	ррь	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants
2001-2001	Bromoform	2.05	0.0000- 7.1000	ppb	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants
2001-2001	Bromodichloromethand	1.98	0.0000- 5.9000	ppb	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants
2001-2001	Chlorodibromomethano	3.73	0.0000- 13.0000	ppb	Unregulated contaminant monitoring helps EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants

Turbidity

Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea and associated headaches.

Year	Constituent	Highest Single Measurement	Lowest Monthly % of Samples Meeting Limits	Turbidity Limits	Unit of Measure	Source of Constituent
2001	Turbidity	0.93	99.4%	0.5	NTU	Soil runoff.

Lead and Copper

Year	Constituent	The 90th Percentile	Number of Sites Exceeding Action Level		Unit of Measure	Source of Constituent
2001	Lead	1.10	0	15	ppb	Corrosion of household plumbing systems; Erosion of natural deposits.
2001	Copper	0.12	0	1.3	ppm	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives.

Total Coliform

NOT DETECTED

Fecal Coliform

NOT DETECTED

Acton Municipal Utility District did not test for Cryptosporidium

Acton Municipal Utility District did not test for Radon

Explanation of Violations

During the year 2001 there were no violations.

Required Additional Health Information

The sources of drinking water (both tap and bottled water) include rivers, lakes, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- (A) Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- (B) Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- (C) Pesticides and herbicides, which may come from a variety of sources such as agriculture, stormwater runoff, and residential uses.
- (D) Organic chemical contaminants, including synthetic and volatile organics, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems.
- (E) Radioactive contaminants, which can be naturally-occurring or be the result oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottles water which must provide the same protection for public health.

Alva Cox provided information included in the water-quality table for the Consumer Confidence Report

For questions concerning Acton Municipal Utility District or our water quality, please call (817) 326-4720.
